

MAK has launched a line of Training Solution products that provide accessible training to warfighters. By combining our Orlando-based training solution and subject matter experts with our Cambridge-based MAK ONE commercial product development team, our end user training products are maintainable, low overhead, visually appealing, and capable of individual and collective training in multi-domain operations.

## MAK Is Your Partner In Training Solution Success

Building on more than three decades in the modeling and simulation industry, MAK Technologies has become a trusted supplier of Training Solutions powered by our MAK ONE Commercial-Off-the-Shelf (COTS) simulation technology for both the United States (US) Department of Defense (DoD) and customers around the world.

# MAK ONE Training Solutions

TRAINING SOLUTIONS DESIGNED TO FIT **YOUR** TRAINING NEEDS

Because of the strength and flexibility of the MAK ONE multi-domain whole world simulation platform, we can build training solutions of all shapes and sizes to solve your unique training challenges. Here are a few of our MAK ONE-based training solutions available for your training needs:

## ⚡ MAK FIRES ▶

A portable training system that delivers effective Call for Fire (CFF) training — wherever you are. It is designed for individual Forward Observers (FO) to train right from their home-station using innovative text-to-speech technology or as part of a formal CFF classroom environment. With MAK FIRES, trainees benefit from flexible configuration options to prepare for live fire training, train individual FO, and prepare for tactical maneuvers to coordinate fires.

## ◀ MAK CST

A low-overhead Command & Staff Trainer (CST) that simulates a full spectrum of operations at all levels — from squad leader through brigade commander. Whether you're training for regular or irregular warfare, border and force protection, or civil emergency response, MAK CST provides realistic scenarios to challenge the trainees so they can hone their decision-making and communication skills.

## MAK ISR ▶

A flexible and powerful solution designed to address the range of Sensor-Operator and Pilot training requirements, from adding Intelligence, Surveillance, and Reconnaissance (ISR) sensors to existing training systems, to training in-depth system operations, to training the full airborne mission team. MAK ISR comes with a high-fidelity simulation of the L3Harris Wescam's MX family of sensors available.

## ◀ MAK Ground

MAK Ground provides a flexible environment for replicating commander, gunner, and driver stations. Role players can interact with Artificial Intelligence (AI) team members within the MAK ONE multi-domain environment to train their individual skills. Want to design a new gunner interface? MAK Ground provides a perfect prototyping environment for human factors analysis and user touchpoints.
